## Emergency Stop Switch

## Install in 22-dia. or 25-dia. Panel Cutout

- Positive opening mechanism with minimum contact separation of 3 mm in accordance with EN60947-5-1, $\Theta$.
- Safety Lock Mechanism prevents misuse. (No tampering - in accordance with EN 418)
- Easy mounting and removal of Switch Unit using an incorporated lever.
- Increase wiring efficiency with three-row mounting for the Switch Unit.
- Finger protection mechanism on Switch Unit provided as a standard feature.
- Install using either round, forked crimp terminals, or

 ferrules.

This product was manufactured at OMRON Izumo. OMRON Izumo has obtained approvals from international certification bodies for its quality system and environmental control system.

## Ordering Information

## ■ Construction

(The above figures are examples of the lighted model.)

Refer to the page $\$ 48$ t 64 for specifications, accessories, installation, and precautions.

## Safety Lock Mechanism to Prevent Misuse

This Switch can be intentionally used to stop equipment in an emergency. Even if an object or person touches the Pushbutton by mistake, the contact will not be released unless the Pushbutton reaches the lock position.
Contacts are arranged in a row to provide more space depthwise for multi-contact applications.

DPST-NO monoblock and DPST-NC monoblock models are available as options. See page51. (With non-lighted models, combination with
4PST-NC/DPST-NC or 6PST-NC is possible.)
This Switch uses a finger protection mechanism to prevent electrical shocks. Moreover, it is provided with a mechanism to prevent terminal screws from coming off and also allows connection to either round or forked crimp terminals.

## ■ Model Number Legend (Completely Assembled)

Shipped as a set which includes the Operational Unit and Switch Unit.

Note: The LED lamp (24 VAC/DC) can be lit by directly applying 110 VAC/DC (220 VAC/DC) to the lamp terminal. LED incorporates the 24-VAC/DC type.
*1) Operational voltage: 95 to 110 VAC
*2) Operational voltage: 190 to 230 VAC
