## OmROn

## Tactile Switch (Hinged Type)

## Hinged Design Developed through

## Human Engineering

■ Quick, superior snap action through hook-type hinge construction.

- Available with 1 or 2 LEDs or without LEDs.
- Available in 8 hinge button colors for a total of 56 button color/LED variations.

■ Used in audio equipments, office equipments, transmitters, measuring instruments, TVs, and VCRs.

## Ordering Information

## Model Number Legend:

## B3J- $\square \mathbf{0 0}$ <br> 12

1. LED

No LED
Red (One LED)
Yellow (One LED)
Green (One LED)
Red/yellow (Two LEDs)
Red/green (Two LEDs)
Yellow/green (Two LEDs)
2. Color of hinged button

0: Light gray
1: Black
2: Orange
3: Yellow
4: Blue
5: Green
6: White
7: Light green

## Specifications

## ■ Ratings/Characteristics

| Switching capacity | 1 to $5 \mathrm{~mA}, 5$ to 24 VDC (resistive load) |
| :--- | :--- |
| Contact configuration | SPST-NO |
| Contact resistance | $100 \mathrm{~m} \Omega \mathrm{max}$. (rated: $1 \mathrm{~mA}, 5 \mathrm{VDC}$ ) |
| Insulation resistance | $100 \mathrm{M} \Omega \mathrm{min}$. (at 250 VDC ) |
| Dielectric strength | $500 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 min |
| Bounce time | 5 ms max. |
| Vibration resistance | Malfunction: 10 to $55 \mathrm{~Hz}, 1.5-\mathrm{mm}$ double amplitude |
| Shock resistance | Destruction: $1,000 \mathrm{~m} / \mathrm{s}^{2}$ approx. 100 G$\}$ max. <br> Malfunction: $100 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 10 G$\} \mathrm{max}$. |
| Life expectancy | $3,000,000$ operations min. |
| Ambient temperature | $-25^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ (with no icing) |
| Ambient humidity | $35 \%$ to $85 \%$ |
| Weight | Approx. 1.5 to 1.7 g |

## Nomenclature

## Engineering Data

## Operating Force vs. Stroke (Typical)

## Dimensions

Note: All units are in millimeters unless otherwise indicated. Unless otherwise specified, a tolerance of $\pm 0.4$ mm applies to all dimensions.

## Types with no LED

B3J-1 $\square 00$

1 LED Types
B3J-2 $\square 00,-3 \square 00,-4 \square 00$

## 2 LED Types

B3J-5 $\square 00,-6 \square 00,-7 \square 00$

## PCB Mounting (Top View)

PCB Mounting (Top View)
Terminal Arrangement /Internal Connections $\begin{array}{ll} & \begin{array}{l}\text { Two, } 1.8 \pm 0.05 \text { dia.* }\end{array} \\ \text { । } \quad, & \text { (For positioning boss) }\end{array}$ Panel Cutout

* Fit the projection of the Switch into this hole to secure the Switch.

Panel Cutout
Terminal Arrangement /Internal Connections

* Fit the projection of the Switch into this hole to secure the Switch.

## ■ Operating Characteristics

| Item | B3S-1000 |
| :--- | :--- |
| Operating force (OF) | $1.27 \pm 0.49 \mathrm{~N}\{130 \pm 50 \mathrm{gf}\}$ |
| Releasing force (RF) | $0.29 \mathrm{~N}\{30 \mathrm{gf}\} \mathrm{min}$. |
| Pretravel (PT) | $0.3^{+0.2} /-0.1 \mathrm{~mm}$ |

## Built-in LED Performance

| Item |  | Red | Yellow | Green |
| :--- | :--- | :--- | :--- | :--- |
| Forward voltage $\mathrm{VF}_{\mathrm{F}}$ | Standard value (V) | 2.0 | 2.0 | 2.1 |
| Forward current IF | Standard value (mA) | 20 | 20 | 20 |
| Permissible loss P | Absolute maximum value (mW) | 84 | 84 | 84 |
| Reverse voltage $\mathrm{VR}_{R}$ | Absolute maximum value (V) | 5 | 5 | 5 |

Note: Since the built-in LED doesn't contain any limiting resistors, externally connect limiting resistors within the limits shown in the above table.

## Precautions

## Operation

Do not repeatedly operate the Switch with excessive force. Applying excessive pressure or applying additional force after the pushbutton has stopped may deform the disc spring of the Switch, resulting in malfunction.
The Switches are not sealed and should be protected with a resin sheet as shown below when used in dust-prone environments.
Do not bend or pull on the LED terminals. Clinching them during PCB mounting or pulling on lead wires when soldering may cause malfunction.

## PCB

The Switch is designed for a $1.6-\mathrm{mm}$-thick, single-sided PCB. Using PCBs that are different in thickness or using double-sided, throughhole PCBs may result in loose mounting, improper insertion, or poor heat resistance in soldering. Whether these problems arise or not will be depend on the type of holes, patterns, etc. Therefore, it is recommended that a verification test is conducted before use.
PCB dimensions shown in Dimensions above indicate reference values for a single-sided PCB with a thickness of 1.6 mm . For through-hole PCBs, make terminal holes $10 \%$ to $20 \%$ larger within the specified design tolerance so that terminals can be inserted easily.

## Soldering

The Switch can be soldered automatically or manually.
The automatic soldering of the Switch on a $1.6-\mathrm{mm}$-thick, singlesided PCB must be completed within five seconds at a soldering temperature of $260^{\circ} \mathrm{C}$ maximum.
The manual soldering of the Switch on a $1.6-\mathrm{mm}$-thick, single-sided PCB must be completed within three seconds at a soldering iron tip temperature of $350^{\circ} \mathrm{C}$ maximum.
When using a multi-layer PCB, test the PCB in advance because the Switch mounted to the PCB may be deformed by heat if the pattern or land design is improper.
Soldering may be repeated only once at a minimum interval of five minutes if the Switch is not soldered properly.
Make sure that no flux will rise on the mounting surface of the PCB. The flux should not be removed or rinsed off after soldering. Doing so may cause flux or dust on PCBs to get inside the Switch, resulting in malfunction.

## Indicators

- Connect a limiting resistor to the indicator. Since the Switch does not contain any limiting resistor, obtain a limiting resistance according to the following formula depending on the voltage to be used so as to satisfy indicator characteristics.

Limiting Voltage used [E] - Indicator forward voltage [ $\mathrm{V}_{\mathrm{F}}$ ] ( $\Omega$ ) [R] Indicator forward current $\left[\mathrm{l}_{\mathrm{F}}\right]$

Ambient temperature $\mathrm{Ta}\left({ }^{\circ} \mathrm{C}\right)$

Forward current $\mathrm{I}_{\mathrm{F}}$ (mA)

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
To convert millimeters into inches, multiply by 0.03937 . To convert grams into ounces, multiply by 0.03527 .
