## omROn

## Digital Controller

## Intelligent, User-friendly Digital Controller and Programmer

- Controlled with ease with a support software which is input via the communication jack on the front panel.
- Minute adjustment of PID parameters can be done easily using fuzzy fine-tuning.
- Any available functions can be assigned to the front keys to make an optimum MMI (Man Machine Interface) that displays the items required by the user.
■ The incorporated hybrid control (advanced PID and fuzzy logic) function makes high-precision control possible.
- Both cascade and proportional position control can be performed using a single controller. (Models with secondary inputs have been added for the ES100P
 as well.)
- Analog and digital processing can be combined.

■ 400 steps max. are possible with the ES100P (99 program patterns, 99 steps).

## Ordering Information

These models are not provided with a Control Output Unit. Be sure to specify the Control Output Unit when ordering.

## - Temperature/Process Controllers

## ES100X Controller

Standard and Heating/Cooling Controllers*

| Transmission output |  | None | 4 to 20 mA |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Specifications

## ■ Ratings

| Supply voltage | 100 to 240 VAC, $50 / 60 \mathrm{~Hz}$ |
| :---: | :---: |
| Operating voltage range | $85 \%$ to $110 \%$ of rated supply voltage |
| Power consumption | Approx. 20 VA (at 100 VAC ) to 25 VA (at 240 VAC$)$ |
| Analog input 1 (main input) | Current input: 4 to $20 \mathrm{~mA}, 0$ to 20 mA (impedance: $150 \Omega \pm 10 \%$ ) <br> Voltage input: 1 to $5 \mathrm{~V}, 0$ to $5 \mathrm{~V}, 0$ to $1 \mathrm{~V}, 0$ to $10 \mathrm{~V}, 0$ to $10 \mathrm{mV}, 0$ to $100 \mathrm{mV},-10$ to 10 mV (impedance: $1 \mathrm{M} \Omega \mathrm{min}$.) <br> Thermocouple:R, S, K, J, T, E, B, N, L, U, PLII, W <br> Platinum resistance thermometer: Pt100, JPt100 |
| Analog input 2 (aux. input, ES100X only) | Current input: 4 to 20 mA (impedance: $150 \Omega \pm 10 \%$ ) Voltage input: 1 to 5 V (impedance: approx. $1 \mathrm{M} \Omega$ ) |
| CT input (see note 1) | Connect the dedicated CT (E54-CT1 or E54-CT3). |
| Potentiometer input (see note 1) | $100 \Omega$ to $2.5 \mathrm{k} \Omega$ |
| Control output (see note 2) | Output Unit (sold separately) (use the Output Unit to obtain a control output. The position proportional output type, however, has Relay Output Units on its socket.) |
| Control mode | Hybrid of fuzzy logic and advanced PID control (2-PID) with auto-tuning and fine-tuning or ON/OFF. |
| Auxiliary output | Relay output: two Independent outputs (SPDT and SPST-NO), 250 VAC, 3 A Open collector output: common outputs, $24 \mathrm{VDC}^{+10 \% /-15 \%}$, max. load current: 100 mA |
| Transmission output | 1 output, 4 to 20 mA with a load of $600 \Omega$ max. |
| External signal input (auxiliary input) | Power supply: $24 \mathrm{VDC}^{+10 \% /-15 \% \text {, }}$ <br> (the model with expansion I/O needs an external power supply) Current when the signal is ON : 3 mA max. Leakage current when the signal is OFF: 0.3 mA max. |
| Setting method | Digital setting with Up and Down Keys or Support Software (via RS-232C terminal on the front panel) |
| Indication method | Digital indications (character height: PV: 14.2 mm , SV: 10.2 mm , BANK, STEP, PTN: 7.6 mm ) (color PV: red, SV: green, BANK, STEP, PTN: yellow) <br> Bar graph indication (resolution: 10; color: green) <br> Status of ramp and soak (displayed by green LED (ES100P only)) |
| Other functions | Manual output <br> Communications (RS-232C, RS-422/RS-485, BCD) <br> Assignments (front keys, setting/display items, digital I/O, and analog I/O) <br> Processing (four fundamental arithmetic operations, primary time-lag filters, linear <br> approximation, broken line approximation, extraction of a square root, logical operation, <br> average addition, average movement) <br> ON/OFF timer <br> Heating and cooling control (except the Proportional Positioning Model) <br> SP setting limiter, SP rise/fall rate limiter, MV (output) change rate limiter, key protect selection etc. <br> 8 banks (set value, event output, PID parameter, MV (output) limiter), program bank (ES100X only) <br> Cascade control (possible with a single model with secondary input) (ES100X only) <br> Fixed SP, time signal, step output (ES100P only) |

Note: 1. Either a CT input or a potentiometer input is available (both of them cannot be used at the same time).
2. All control outputs are electrically insulated from the internal circuitry (except transfer output and auxiliary terminal output).

## ■ Output Unit Ratings

| ON/OFF | Relay Output Unit | E53-R | SPDT; 5 A, 250 VAC (resistive load) |
| :---: | :---: | :---: | :---: |
|  | SSR Output Unit | E53-S | SPST-NO; 1 A, 75 to 250 VAC; leakage current: 1.5 mA max. (at 200 VAC ) |
|  | Voltage Output Unit (for driving SSR) | E53-Q | 40 mA max., 12 VDC ; NPN (with short-circuit protection) |
|  |  | E53-Q3 | 20 mA max., 24 VDC; NPN (with short-circuit protection) |
|  |  | E53-Q4 | 20 mA max., 24 VDC ; PNP (with short-circuit protection) |
| Linear | Current Output Unit | E53-C3 | 4 to 20 mA , DC: $600 \Omega$ max.; resolution: approx. 2,600 |
|  |  | E53-C3D | 0 to 20 mA , DC: $600 \Omega$ max.; resolution: approx. 2,600 |
|  | Voltage Output Unit | E53-V34 | 0 to $10 \mathrm{VDC}: 1 \mathrm{k} \Omega$ min.; resolution: approx. 2,600 |
|  |  | E53-V35 | 0 to 5 VDC : $1 \mathrm{k} \Omega$ min.; resolution: approx. 2,600 |

## ■ Current Transformer Ratings

| Max. continuous heater current | 50 A |
| :--- | :--- |
| Dielectric strength | 1,000 VAC (for 1 min ) |
| Vibration resistance | 50 Hz (approx. 10G) |
| Weight | E54-CT1: Approx. 11.5 g; E54-CT3: Approx. 50 g |
| Accessories (E54-CT3 only) | Contact: 2; Plug: 2 |

## ■ Controller Characteristics

| Item | ES100X | ES100P |
| :---: | :---: | :---: |
| Indication accuracy (see note) | Thermocouple ( $\pm 0.1 \%$ of indication value or $\pm 1^{\circ} \mathrm{C}$, whichever greater) $\pm 1$ digit max. Platinum resistance thermometer ( $\pm 0.1 \%$ of indication value or $\pm 0.5^{\circ} \mathrm{C}$, whichever greater) $\pm 1$ digit max. <br> Voltage/current input ( $\pm 0.1 \%$ FS, $\pm 1$ digit max.) |  |
| ON/OFF control hysteresis | 0.01\% to 99.99\% FS (in units of 0.01\%) |  |
| Proportional band | $0.0 \%$ to $999.9 \%$ FS (ON/OFF control when $0.0 \%$ ) <br> $0.1 \%$ to $999.9 \%$ FS (proportional position model) (in units of $0.1 \%$ ) |  |
| Integral (reset) time | 0 to 9,999 s (PD control when 0 s ) (in units of 1 s ) |  |
| Derivative (rate) time | 0 to 9,999 s (PI control when 0 s ) (in units of 1 s ) |  |
| Fuzzy intensity | 0.0\% to 100.0\% (Advanced PID control (2-PID) when 0.0\%) (in units of 0.1\%) |  |
| Event set value | Equivalent to -200.0\% to 200.0\% FS of industrial value or unit |  |
| Control period | 1 to 120 s (in units of 1 s ) |  |
| Sampling period | 0.1 s min . type 0.2 s (in units of 1 s ) |  |
| Display refresh period | As large as, twice as large as, 5 times as large as, or 10 times as large as control operation period |  |
| PV compensation | Equivalent to $-100.0 \%$ to 100.0\% FS of industrial value or unit |  |
| Manual manipulated value | -5.0\% to 105.0\% |  |
| Manipulated value limit | Lower limit: $-5.0 \%$ to $-0.1 \%$ max.; upper limit: +0.1\% min. to 105.0\% |  |
| Setting time (1 step) | --- | 0 to 99 hours 59 minutes or 0 to 99 minutes 59 seconds |
| Program capacity | --- | Total steps 400 max. (99 patterns, 99 steps) |
| Programming method | --- | Break point method (patterns can be decided by the user) |
| Insulation resistance | $20 \mathrm{M} \Omega \mathrm{min}$. |  |
| Dielectric strength | 2,000 VAC, $50 / 60 \mathrm{~Hz}$ for 1 min between terminals of different polarities |  |
| Vibration resistance | Malfunction: 10 to $150 \mathrm{~Hz}, 0.5-\mathrm{mm}$ single amplitude each in $\mathrm{X}, \mathrm{Y}$, and Z directions Destruction: 10 to $150 \mathrm{~Hz}, 0.75-\mathrm{mm}$ single amplitude each in $\mathrm{X}, \mathrm{Y}$, and Z directions |  |
| Shock resistance | Malfunction:20G max., 3 times each in 6 directions Destruction:30G max., 3 times each in 6 directions (20G's in the forward direction) |  |
| Ambient temperature | Operating: $-10^{\circ}$ to $55^{\circ} \mathrm{C}$ (with no icing) Storage: $-25^{\circ}$ to $65^{\circ} \mathrm{C}$ (with no icing) |  |
| Ambient humidity | Operating: 35\% to 85\% |  |
| Memory protection | Lithium cell backup (10 years at normal room temperature) |  |
| Enclosure ratings | Front panel: IEC standard IP50 (with water proof cover: IP66, NEMA4) <br> Rear case: IEC standard IP20 <br> Terminals: IEC standard IP00 (with terminal cover: VDE 0106/P100) |  |
| Weight | Approx. 800 g |  |

Note: Indication accuracy varies with the type of sensor and the sensing temperature as follows:
$K$ and $T$ sensor ( $-100^{\circ} \mathrm{C}$ max.), $R$, $S$, and $W$ sensor ( $200^{\circ} \mathrm{C}$ max.), and $U$ sensor: $\pm 2^{\circ} \mathrm{C} \pm 1$ digit; $B$ sensor ( $400^{\circ} \mathrm{C}$ max.): $\pm 6^{\circ} \mathrm{C} \pm 1$ digit Indication accuracy without using the built-in cold contact compensation circuit is $\pm 0.1 \% \mathrm{FS}$ or $\pm 1^{\circ} \mathrm{C}$ whichever is smaller except for the following sensors:
$R$ and $S$ sensor ( $200^{\circ} \mathrm{C}$ max.): $\pm 1.5 \pm 1$ digit; L 2 and $U$ sensor: $\pm 1^{\circ} \mathrm{C} \pm 1$ digit

## ■ Output Unit Characteristics

| Relay Unit life expectancy | Mechanical: $10,000,000$ operations min. <br> Electrical: 100,000 operations min. |
| :--- | :--- |

- Heater Burnout Detection Characteristics

| Max. heater current | 50 A, single-phase |
| :--- | :--- |
| Monitor accuracy of input current | $\pm 5 \%$ FS $\pm 1$ digit max. |
| Heater burnout detection setting range | 0.0 to 50.0 A (see note 1) |
| Heater current monitor range | 0.0 to 55.0 A |
| Min. detectable ON time | 200 ms (see note 2) |

Note: 1. Heater burnout is not detected when current is set to 0.0 A ; the burnout alarm will be automatically turned ON when current is set to 50.0 A.
2. When the control output is ON for less than 200 ms , heater burnout is not detected and heater current is not measured.

## - Watertight Cover Characteristics

| Enclosure ratings | Front cover: IEC standard IP66, conforming to NEMA 4 |
| :--- | :--- |

## ■ Terminal Cover Characteristics

| Enclosure ratings | Conforming to VDE0106/P100 |
| :--- | :--- |

## ■ Support Software Characteristics (For Windows)

| Personal computer | Windows-compatible computer with Pentium or higher, and 800 x <br> 600 min. display. |
| :--- | :--- |
| OS | Windows 95, Windows 98, Windows NT4.0, or Windows 2000 |
| Main memory | 16 MB for Windows 95 and Windows 98 <br> 24 MB for Windows NT and Windows 2000 |
| Communications method | RS232C; half-duplex |
| Transmission speed | 9,600 bps |
| Printer | Windows-compatible printer |

## - Communications

| Communications | RS-232C | RS-422 | RS-485 | BCD | Transmission <br> output |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Transmission method | None, <br> half-duplex | 4-wire, <br> half-duplex | 2-wire, <br> half-duplex | Data select code <br> method | 4 to 20 mA <br> Load: $600 \Omega$ max. <br> resolution: 12 -bit |
| Synchronization method | Start-stop synchronization | --- | --- | --- |  |
| Baud rate | $1,200 / 2,400 / 4,800 / 9,600 / 19,200$ bps |  |  |  |  |
| Transmission code | ASCII (7-bit) (see note 3) |  |  |  |  |

Note: 1. The maximum total cable length must not exceed the following limits.
RS-422: $500 \mathrm{~m}, \mathrm{RS}-232 \mathrm{C}: 15 \mathrm{~m}, \mathrm{RS}-485: 500 \mathrm{~m}$
2. A maximum of 32 Temperature Controllers can be connected to one host computer using serial communications (RS-422 or RS-485).
3. 8-digit ASCII codes can be also used.

## Operation

## ■ Sampling Period

The sampling period of the ES100-series Digital Temperature Controller is factory-set to 200 ms If only the advanced PID control is used, the sampling period will vary with the Model as follows (with a baud rate of 9,600 bps for the Models incorporating a communications function):

| Model | Sampling period | Model | Sampling period |
| :--- | :--- | :--- | :--- |
| ES100X-AAH | 100 ms | ES100X-AAHFB | 100 ms |
| ES100X-AAHFD | 100 ms | ES100X-AAHFE | 100 ms |
| ES100X-AAWHFB | 100 ms | ES100X-AAWHFE | 100 ms |
| ES100X-AAH01FE | 100 ms | ES100X-AAH04FE | 100 ms |
| ES100X-AAWH01FE | 200 ms | ES100X-RRPFD | 200 ms |
| ES100X-RRPFB | 100 ms | ES100X-RRPWFB | 100 ms |
| ES100X-RRPFE | 100 ms | ES100X-RRP01FE | 100 ms |
| ES100X-RRPWFE | 100 ms | ES100X-RRPW01FE | 100 ms |
| ES100X-RRP04FE | 100 ms | ES100P-AAHFE | 200 ms |
| ES100X-RRPW04FE | 200 ms | ES100P-AAH01FE | 100 ms |
| ES100P-AAHFD | 100 ms | ES100P-AAWH01FE | 100 ms |
| ES100P-AAWHFE | 200 ms | ES100P-RRPFD | 200 ms |
| ES100P-AAH04FE | 200 ms | ES100P-RRPWFE | 200 ms |
| ES100P-AAWH04FE | 200 ms | ES100P-RRP04FE | 200 ms |
| ES100P-RRPFE | 200 ms | ES100P-RRPW04FE | 200 ms |
| ES100P-RRP01FE | 200 ms | 200 ms |  |
| ES100P-RRPW01FE | 200 ms |  |  |

The control operation period is an important factor for the following control operations (refer to ES100X/ES100P Operation Manual for details):
Heating/cooling control
Cascade control
Fuzzy control
Analog I/O assignment
Digital I/O assignment
No. of events used
No. of times that ON/OFF timer used
Input type selector (linearization required or not)
Terminal communications baud rate
Use of digital I/O (BCD communication)
The control operation period can be checked with the monitor (character P229) in the check mode.

## - Product Inspection Sheet

Contact your OMRON representative if Product Inspection Sheet are required.

## Dimensions

Note: All units are in millimeters unless otherwise indicated.

## Y92A-96N Watertight Cover

## E53-cov01 Terminal Cover

## Installation

■ Factory Allocations of Terminal Functions
Basic Model ES100■-AAH

The allocation shown in the diagrams is applicable to all Basic Models.
Input $\mathrm{K}_{1}$ : -200 to $1,300^{\circ} \mathrm{C}$
Control output: Heating control
Auxiliary output: Upper-limit deviation alarm (to be set with EV1 and EV2)
If the heating/cooling control mode is selected, AO1 is used for heating and AO 2 is for cooling control output. To use AO1 and AO2, purchase Output Units.

Terminal Functions (Fixed) of Models other than Basic Models

Proportional Positioning Control
ES100 $\square$-RRP $\square \square \square \square \square$

Upper Link RS-232C
ES100 $\square-\square \square \square \square 01 \square \square$

NOT USED (25)
RD 16
NOT USED 24
SG (15)

Upper Link RS422/485
ES100 $\square-\square \square \square \square 04 \square \square$

## Terminal Functions (Possible to Relocate) of Models other than Basic Models

## Input 2 ( $\mathbf{4}$ to 20 mA Remote Setting)

## ES100 $\square-\square \square W \square \square \square \square \square$

Initial setting: Use an input of 4 to 20 mA for remote setting. The setting will be effective in the SP mode.

## Transmission Output (Al1 Process Value)

ES100 $\square$ - $\square \square \square \square \square \square \mathrm{F} \square$
Initial setting: The value measured by analog input 1
will be output in a range of 4 to 20 mA .

Digital I/O (Possible to Relocate) of Models other than Basic Models

Digital Input (Bank selectable) for ES100X
ES100X- $\square \square \square \square \square \square \square$ B
Initial setting: Used to select a bank. The terminals operate as follows:
BNK0: $2^{0}$
BNK1: $2^{1}$
BNK2: $2^{2}$

Digital I/O (Bank selectable) for ES100X ES100X- $\square \square \square \square \square \square \square D$

Initial setting: Used to select a bank. The terminals operate as follows:
BNKO: $2^{0}$
BNK1: $2^{1}$
BNK2: $2^{2}$

Expansion Digital I/O for ES100X
ES100X- $\square \square \square \square \square \square$

Digital I/O (Operation Instruction and Time Signal) for ES100P
ES100P-ㅁㅁㅁㅁㅁ
Initial setting: The RUN, RST, and HOLD input are used to operate the program. Time signals set by programs are output from the terminals.

## Expansion Digital I/O for ES100P

DI1 through DI8 are digital input terminals and SUBOUT3 through SUBOUT10 are digital auxiliary output terminals, both sets of which can be allocated as instructed by the user's software. The terminals without allocation prior to shipping can be freely allocated as required by the user.
DI9 through DI15 are special terminals for BCD communication.

## ES100 Documentation

| Name | Catalog no. |
| :--- | :--- |
| ES100P Digital Controller User's Manual | H69 |
| ES100X Digital Controller User's Manual | H70 |
| ES100 <br> ES/TOOLS Support Software for Windows User's Manual | H115 |
| ES100 Digital Controller User's Manual (Communications Guide) | H72 |

## ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937 . To convert grams into ounces, multiply by 0.03527 .

Cat. No. H058-E1-3 In the interest of product improvement, specifications are subject to change without notice.
