## OMRON **Weighing Meter**

#### **Highly Functional Weighing Meter with** Easy-to-read LED

- Easily programmable through the front panel or via RS-232C, RS-485, or RS-422.
- Programming with easy setup and calibration.
- Load cell can be connected to a maximum of 20 mV/V.
- Easy-to-use scaling function with the key programming method.
- A wide range of Output Boards, including communications and linear boards.
- Tare function allows zero adjustment at the reference position.
- Load cell power supply of 100 mA at 10 VDC.
- NEMA4/IP66 front panel.
- Conforms to EMC standards, EN61010-1 (IEC1010-1).
- UL/CSA approved.

## Ordering Information

Model	Su	ipply voltage
	100 to 240 VAC	12 to 24 VDC
Basic Models	K3NV-LC1A	K3NV-LC2A
These models provide a process value LED and front-panel control keys. Can be connected to avail- able Output Board, or can be used for display only without an Output Board.		
Set Value LED Models	K3NV-LC1C	K3NV-LC2C
These models provide a pro- cess value LED, set value LED, and front-panel control keys. Can be connected to Relay Contact, Transistor, or Com- bination Output Boards.		

# K3NV

Output type	Output configuration	Output	Bas	se units
		boards	Basic	Set Value LED Display
Relay contact	3 outputs: H, PASS, L (SPDT)	K31-C1	Yes	Yes
	5 outputs: HH, H, L, LL (SPST-NO), and PASS (SPDT)	K31-C2	Yes	Yes
	5 outputs: HH, H, L, LL (SPST-NC), and PASS (SPDT)	K31-C5	Yes	Yes
Transistor	5 outputs (NPN open collector)	K31-T1	Yes	Yes
	5 outputs (PNP open collector)	K31-T2	Yes	Yes
BCD (see note)	5-digit output (NPN open collector)	K31-B2	Yes	
Linear	4 to 20 mA DC	K31-L1	Yes	
	1 to 5 VDC	K31-L2	Yes	
	1 mV/10 digits	K31-L3	Yes	
	0 to 5 VDC	K31-L7	Yes	
	0 to 10 VDC	K31-L8	Yes	
Communication boards	RS-232C	K31-FLK1	Yes	
(see note)	RS-485	K31-FLK2	Yes	
	RS-422	K31-FLK3	Yes	
Combination output and	BCD output + 5 transistor outputs (NPN open collector)	K31-B4	Yes	Yes
communication boards	4 to 20 mA + 5 transistor outputs (NPN open collector)	K31-L4	Yes	Yes
	1 to 5 V + 5 transistor outputs (NPN open collector)	K31-L5	Yes	Yes
	1 mV/10 digits + 5 transistor outputs (NPN open collector)	K31-L6	Yes	Yes
	0 to 5 VDC + 5 transistor outputs (NPN open collector)	K31-L9	Yes	Yes
	0 to 10 VDC + 5 transistor outputs (NPN open collector)	K31-L10	Yes	Yes
	RS-232C + 5 transistor outputs (NPN open collector)	K31-FLK4	Yes	Yes
	RS-485 + 5 transistor outputs (NPN open collector)	K31-FLK5	Yes	Yes
	RS-422 + 5 transistor outputs (NPN open collector)	K31-FLK6	Yes	Yes

### Available Output Board Combinations

Note: For details, refer to the Communication Operation Manual.

#### Model Number Legend:

Base Units and Output Boards can be ordered individually or as sets. Refer to the Available Output Board Combinations table on page 2.

- FLK5: RS-485 + 5 transistor outputs (NPN open collector)
- FLK6: RS-422 + 5 transistor outputs (NPN open collector)

Note: These output types are available on Basic Models only.

## Specifications -

#### Ratings

Supply voltage	100 to 240 VAC (50/60 Hz); 12 to 2	4 VDC				
Operating voltage range	85% to 110% of supply voltage	85% to 110% of supply voltage				
Power consumption (see note)	15 VA max. (max. AC load with all i 10 W max. (max. DC load with all ir					
Sensor power supply	100 mA at 10 VDC±5%					
Insulation resistance	$20 \ \text{M}\Omega \ \text{min.}$ (at 500 VDC) between Insulation provided between inputs					
Dielectric withstand voltage	2,000 VAC for 1 min between exter Insulation provided between inputs					
Noise immunity	±1,500 V on power supply terminals square-wave noise with 1 ns	$\pm 1{,}500$ V on power supply terminals in normal or common mode $\pm 1~\mu s,100$ ns for square-wave noise with 1 ns				
Vibration resistance	Malfunction: 10 to 55 Hz, 0.5-mm for 10 min each in X, Y, and Z directions Destruction: 10 to 55 Hz, 0.75-mm for 2 hrs each in X, Y, and Z directions					
Shock resistance	Malfunction: 98 m/s <sup>2</sup> (10G) for 3 times each in X, Y, and Z directions Destruction: 294 m/s <sup>2</sup> (30G) for 3 times each in X, Y, and Z directions					
Ambient temperature		Operating: -10°C to 55°C (with no icing) Storage: -20°C to 65°C (with no icing)				
Ambient humidity	Operating: 25% to 85% (with no condensation)					
Ambient atmosphere	Must be free of corrosive gas					
EMC	Emission Enclosure: Emission AC Mains: Immunity ESD: Immunity-RF-interference:	EN55011 Group 1 class A EN55011 Group 1 class A EN61000-4-2:4-kV contact discharge (level 2) 8-kV air discharge (level 3) ENV50140: 10 V/m (amplitude modulated, 80 MHz to				
	1 GHz) (level 3)   10 V/m (pulse modulated, 900 MHz)   Immunity Conducted Disturbance:   ENV50141: 10 V (0.15 to 80 MHz) (level 3)   Immunity Burst: EN61000-4-4:2-kV power-line (level 3)   2-kV I/O signal-line (level 4)					
Approved standards		UL508, CSA22.2; conforms to EN50081-2, EN50082-2, EN61010-1 (IEC1010-1); conforms to VDE106/part 100 (Finger Protection) when the terminal cover is mounted.				
Weight	Approx. 400 g					

Note: An Intelligent Signal Processor with DC supply voltage requires approximately 1 A DC as control power supply current the moment the Intelligent Signal Processor is turned on. Do not forget to take this into consideration when using several Intelligent Signal Processors. When the Intelligent Signal Processor is not in measuring operation (e.g., the Intelligent Signal Processor has been just turned on or is operating for startup compensation time), the display will read "DDDD" and all outputs will be OFF.

#### Input/Output Ratings

#### Relay Contact Output

(Incorporating a G6B Relay)

ltem	Resistive load ( $\cos\phi = 1$ )	Inductive load ( $\cos\phi = 0.4$ , L/R = 7 ms)		
Rated load	5 A at 250 VAC; 5 A at 30 VDC	1.5 A at 250 VAC, 1.5 A at 30 VDC		
Rated carry current	5 A max. (at COM terminal)			
Max. contact voltage	380 VAC, 125 VDC			
Max. contact current	5 A max. (at COM terminal)			
Max. switching capacity	1,250 VA, 150 W 375 VA, 80 W			
Min. permissible load (P level, reference value)	10 mA at 5 VDC			
Mechanical life	50,000,000 times min. (at a switching frequency of 18,000 times/hr)			
Electrical life (at an ambient temperature of 23°C)	100,000 times min. (at a rated load switching frequency of 1,800 times/hr)			

#### **Transistor Output**

Rated load voltage	12 to 24 VDC <sup>+10%</sup> / <sub>-15%</sub>
Max. load current	50 mA
Leakage current	100 μA max.

#### BCD Output

	I/O signal name	Item	Rating
Inputs	REQUEST, HOLD, MAX, MIN, RESET	Input signal	No-voltage contact input
		Input current with no-voltage input	10 mA
		Signal level	ON voltage: 1.5 V max. OFF voltage: 3 V min.
Outputs	DATA, POLARITY, OVERFLOW,	Rated load voltage	12 to 24 VDC +10%/-15%
	DATA VALID, RUN	Max. load current	10 mA
		Leakage current	100 μA max.

Note: Logic method: negative logic

#### Linear Output

Item	4 to 20 mA	1 to 5 V	1 mV/10 digits (see note)
Resolution	4,096		
Output error	±0.5% FS		±1.5% FS
Permissible load resistance	600 Ω max.	500 Ω min.	1 KΩ min.

Note: For the 1 mV/10-digit output, the output voltage changes for every 40 to 50 increment in the display value.

#### Communications

lte	m	RS-232C, RS-422 RS-485			
Transmission meth	od	4-wire, half-duplex 2-wire, half-duplex			
Synchronization m	ethod	Start-stop synchronization			
Baud rate		1,200/2,400/4,800/9,600/19,200/38,400 bps			
Transmission code	•	ASCII (7-bit)			
Communications	Write to K3NV	Comparative set value, scaling value, remote/local programming, forced zero control, reset control of maximum/minimum values, and other setting mode items excluding communication conditions.			
	Read from K3NV	Process value, comparative set value, maximum value, minimum value, model data, error code, and others			

For details, refer to Communication Operation Manual.

#### Measuring Ranges

Input rang	je	Measuring range	Input impedance	Reliability (see note 2)	Instantaneous overload (30 seconds)
DC voltage	R	0.00 to 199.99 mV	10 M $\Omega$ min.	±0.1%rdg ±5 digit max.	±200 V
	Ь	0.000 to 19.999 mV	10 M $\Omega$ min.	±0.1%rdg ±5 digit max.	±200 V
	Ε	±100.00 mV	10 M $\Omega$ min.	±0.1%rdg ±3 digit max.	±200 V

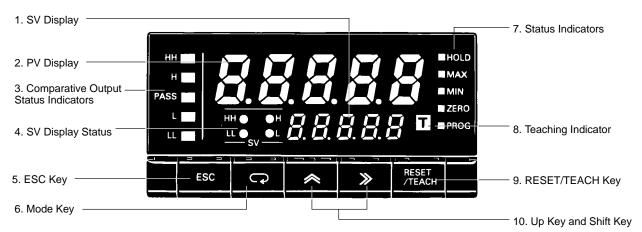

Note: 1. The "rdg" stands for "reading value."

2. The accuracy is guaranteed at the ambient temperature of  $23\pm5^{\circ}$ C. The reliability becomes  $\pm 0.1\%$  FS for values smaller than 10% of the maximum input value for any input range.

#### Load Cell Connection Example

## Nomenclature -

Name	Functions			
1. SV display	Displays the set value or parameter. Available for Set Value LED Models only.			
2. PV display	Displays the process value in addition to the max./min. value or parameter.			
3. Comparative output status indicators	Displays the status of comparative output.			
4. SV display status	Indicates which comparative set value is currently on the SV display.			
5. ESC Key	Used to return to the RUN mode from the Setting Protect, or Maintenance mode. The process value, maximum value, or minimum value to be displayed can be selected.			
6. Mode Key	Used to enter the Setting mode. Used to allow the PV display to indicate set values sequentially. Available for Basic Models only. Used to indicate set values sequentially on the SV display. Available for Set Value LED Models only.			
7. Status indicators	HOLD:Lit when HOLD input is ON.MAX:Lit when the maximum value is indicated on the PV display.MIN:Lit when the minimum value is indicated on the PV display.ZERO:Lit when the forced zero function is activated.PROG:Lit or flashes while parameters are being set.			
8. Teaching indicator	Lit when the teaching function is enabled and flashes when the Intelligent Signal Processor is in teaching operation.			
9. RESET/TEACH Key	The forced zero, maximum value, and minimum value are reset by pressing this key. Teaching is available when the teaching function is enabled.			
10. Up Key and Shift Key	The digit being set is scrolled by pressing the Shift Key. The set value increases by one whenever the Up Key is pressed.			

## **Operation** -

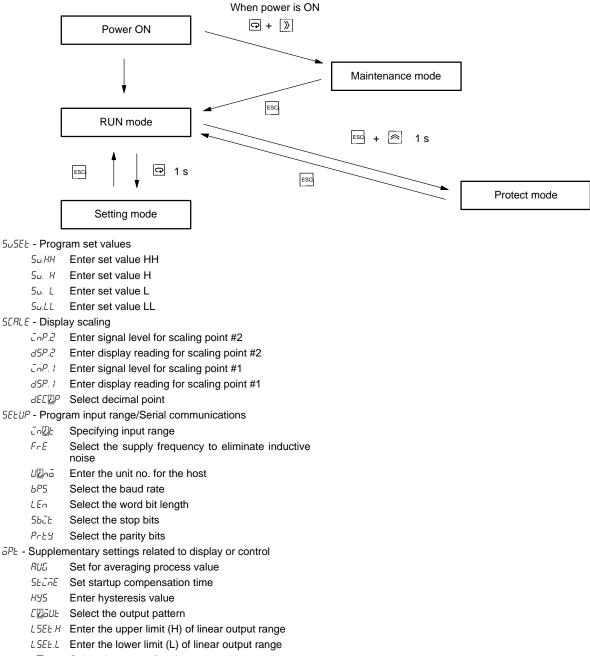

#### Setting Procedures

The K3NV has four modes: RUN mode for normal operations, Setting mode for initial parameter input, Protect mode for lock-out configuration, and Maintenance mode for initializing set values and user calibration. The parameters that are accessible on any individual K3NV will vary depending on the Output Board installed. Refer to the K3NV Operation Manual for details.

RUN Mode:	Remains in this mode under normal operation. The process value or the max./min. value can be monitored. Using the front panel keys, the comparative set value can be changed and forced-zero reset or max./min. values reset can be performed.
Setting Mode:	Used for making initial settings. Includes four menus (Set value (525EE), scaling (5ERLE), setup (5EEUP), option (5PE)) and the output test.
Protect Mode:	Used for locking the front key operation or parameter changes.
Maintonanaa Mada.	Line of the initializing and concerned concerned in a time of the important

Used for initializing set values and user calibration of the inputs. The user calibration is valid for selected input ranges.

#### Parameters

#### Scaling SERL

The Intelligent Signal Processor converts input signals into desired physical values.

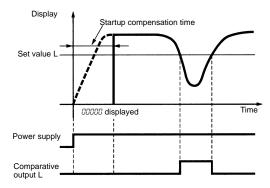

#### Average Processing Rub

The average processing function stabilizes displayed values by averaging the corresponding analog input signals that fluctuate dynamically or reducing the noise in the input signals.

#### Startup Compensation Time 52278

The startup compensation time parameter keeps the measurement operation from sending an unnecessary output corresponding to instantaneous, fluctuating input from the moment the K3NX is turned ON until the end of the preset period.

The compensation time can be set in a range from 0 to 99.9 seconds as the waiting time until the devices subject to measurement become stable after the startup of the power supply.

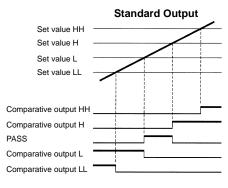

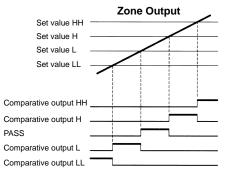

#### Hysteresis H95

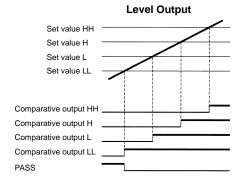

The hysteresis of comparative outputs can be set to prevent the chattering of comparative outputs. Refer to page 12 for more details.

#### Output Pattern Selection []all

The patterns of comparative output are selectable according to the level change. Select the pattern according to the application.

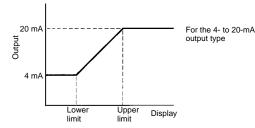

Note: The following setting conditions must be satisfied, otherwise no zone output will turn ON correctly. LL < L < H < HH

#### Linear Output Range LSEE

A linear output range can be set as required. A value corresponding to the maximum output value and that corresponding to the minimum output value can be set.

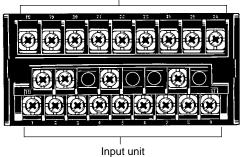

#### Remote/Local Selection r 21

Select remote programming when performing all settings through the host devices and select local programming when performing settings through key operation.

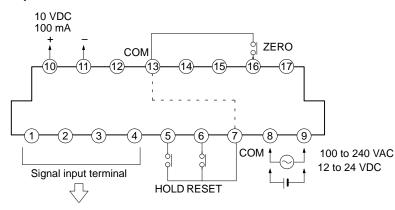

#### External Connections

#### **Terminal Arrangement**

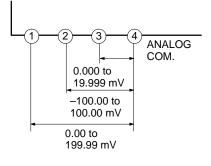

Output unit

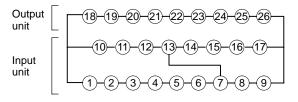

#### LC: Load Cell Input

#### **Terminal Numbers**

Note: Terminals 7 to 13 are connected internally.

When inputting the external control signals through the open collector:

Transistor Inputs:

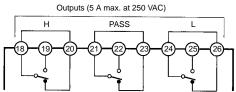

ON: Residual voltage must be 3 V max.

OFF: Leakage current must be 1.5 mA max. The switching capacity must be 20 mA or greater.

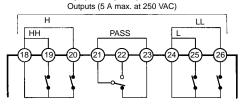

When the external signal input is short-circuited, a voltage of approximately 5 V will be applied to between the terminals 5 to 7 and the COM terminal, and a current of approximately 18 mA (nominal value) will flow.

#### **Output Unit**

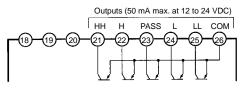

K31-C5: Relay (5 Outputs)

#### K31-FLK3, -FLK6: RS-422

(The right connector is provided only on K31-FLK6)

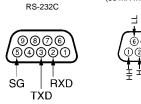

Output NPN Tr. (50 mA max. at 12 to 24 VDC) ۲ 6789 1234

> 푸 COM PASS

#### K31-FLK4: RS-232C + Transistor (NPN Open Collector)

SDB

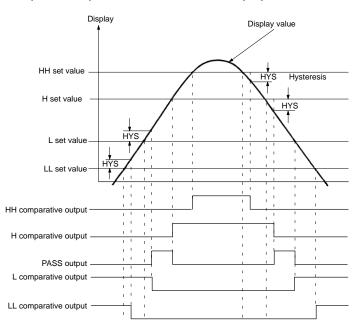

Output NPN Tr. (50 mA max. at 12 to 24 VDC)

#### Output Operation Timing in RUN Mode (Relay or Transistor Outputs)

The following timing chart is for a 5-comparative Output Board when the standard output pattern is selected.

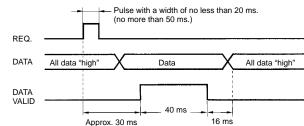

#### BCD Output Timing Chart

A request signal from an external device (such as a Programmable Controller) is required to read BCD data.

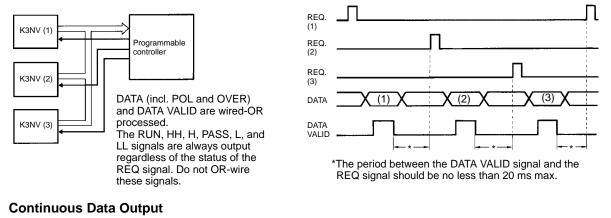

#### **Single Sampling Data Output**

Approximately 30 ms after the REQ signal rises, a sample is taken and the DATA VALID signal is output. Read the data when the DATA VALID signal is ON.

The DATA VALID signal will turn OFF in 40 ms, and then in 16 ms, the data will go OFF.

Models with a BCD output have an open collector output configuration so that wired-OR connection is possible.

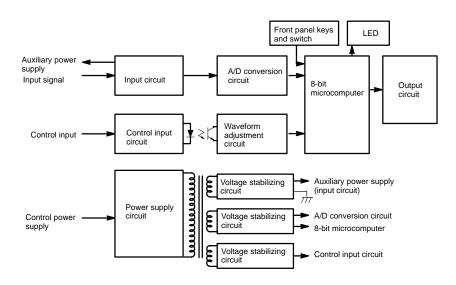

## REQ. DATA All data "high" Data 1 Data 2 DATA VALID Approx. 30 ms 64ms 24ms 64ms 24ms

The K3NV outputs each measurement at an interval of 64 ms when a REQ signal is ON continuously.

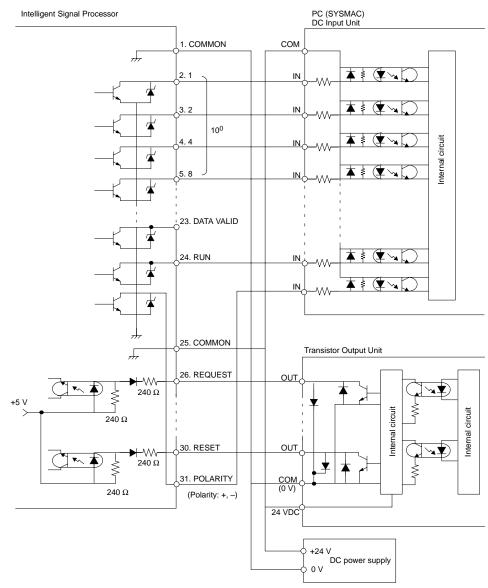

If the HOLD signal is ON at the moment the DATA output is switched from data 1 to data 2 or vice versa, the output BCD data will be either data 1 or data 2 according to the timing of the HOLD signal. However, output data will never below.

## Installation

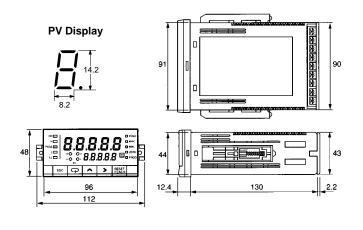

#### ■ Example of Connection to Programmable Controller

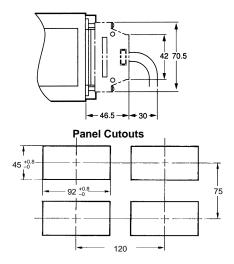

-

## Dimensions -

Note: All units are in millimeters unless otherwise indicated.

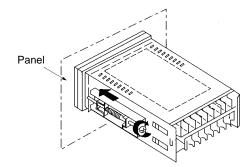

## Precautions

- Be careful not to touch any terminals, otherwise you may receive an electric shock.
- Please do not disassemble the product nor touch the internal components of the product, otherwise you may receive an electric shock.
- Be sure that the power supply voltage is within the rated range.
- Do not use the Intelligent Signal Processor in locations with flammable gas or combustible substances.
- Be sure to wire the terminals correctly by checking the terminal names.
- Be sure that the terminal screws are tightened securely when wiring.

#### Mounting

Recommended panel thickness is 1 to 3.2 mm.

Attach the mounting bracket on the left and right sides of the Intelligent Signal Processor as shown in the illustration above and gradually tighten each screw evenly in turn by considering the balance of the tightening force until the ratchets start slipping without being further tightened.

Mount the Processor as horizontally as possible.

Never use the Processor in locations where corrosive gas (particularly sulfur or ammonia gas) is generated.

As much as possible avoid use of the Processor in a location subject to severe shock or vibration, excessive dust, or excessive moisture.

Select an indoor mounting location where the Intelligent Signal Processor is at the rated temperature and humidity and free from direct sunlight.

Separate the Processor from machines generating high-frequency noise, such as high-frequency welding machines and high-frequency sewing machines.

#### Operation

A Processor model with a Relay Contact or Transistor Output Board may not output any alarm signal normally if the model has an error. It is recommended that an independent alarm device be connected to the model.

The parameters are factory-set so that the Processor will operate normally. The settings of the parameters may be changed according to the application.

#### Unit Label (Attached)

No product is shipped with the unit label attached. Select a unit label from the sheet provided and attach it to the Processor.
