Two-circuit Limit Switch/Long-life Two-circuit Limit Switch

WL-N/WLM-N

Select the Best Two-circuit Switch for the Operating Environment and Application from a Wide Range of Models

- A wide selection of models is available, including General-purpose, Environment-resistant, and Spatterprevention Switches.
- Standard-feature gold-clad crossbar contacts provide high reliability.
 - Applicable to either standard loads or microloads.
- Switches with Lever Actuators provide 90° overtravel, one-side operation, and four-direction head mounting.
- Approved standards: EN/IEC, UL, cUL, and CCC.
 Contact your OMRON representative for information on approved models.

Be sure to read **Safety Precautions** on page 44 to 48 and **Safety Precautions for All Limit Switches**.

Features

Standard Switches

Many Variations in Standard Limit Switches A Wide Range of Models

The series includes includes many different actuators that you select to match the workpiece shape and motion, and a wide range of Switch variations, such as models with operation indicators for easier working and maintenance and models with different types of connectors

Environment-resistant Switches

Select from Six Types of Environment Resistance

The series includes Airtight Switches, Hermetic Switches, Heatresistant Switches, Low-temperature Switches, Corrosion-proof switches, and Weather-proof Switches. You can select the model based on the onsite environment.

Spatter-prevention Switches

Excellent Performance on Arc Welding Lines or Sites with Spattering Cutting Powder Ideal for Welding Sites

These Switches use stainless steel or resin to prevent the adhesion of spatter.

They can be used to reduce problems caused by zinc power generated during welding.

Long-life Switches

Mechanical Endurance of 30 Million Operations Long-life Models for High-frequency Applications

A mechanical durability of 30 million operations minimum is provided. The head features a double-seal structure with a head cap and oil seal

Features Common to All Switches

DPDB Operation

The double-pole, double-break structure ensures circuit braking.

Degree of Protection; IP67

Approved Standards to Aid Export Machines

The Switches are certified for EN/IEC, UL, cUL, and CCC making them ideal for export machines.

Applicable to Either Standard Loads or Microloads

Standard-feature gold-clad contacts provide high reliability. The use of a high-contact-pressure crossbar structure also increases reliability.

Easy to Work With

Downsizing of the built-in switch has increased the space to house the wiring.

The insulating paper that was often in the way when wiring has been eliminated.

Nickle-plated steel screws are used for the terminal screws.

The screws adhere to magnetized screwdrivers to prevent dropping and loosing them.

Models with Connectors to Reduce Wiring

A neon lamp or LED indicates the operating status.

The 3D structure of the lamp cover disperses light so you can check the operating status from the side.

WL-N/WLM-N

Product Configuration

Environment-resistant Switches

	Item	Environment-resistant			
Туре	Model	Application	Environment-resistant construction	Applicable models	
Airtight seal	WL□-55-N		Uses an airtight built-in switch. Note: Use the SC Connector for the conduit opening.	All models except the low- temperature and heat-re- sistant models Note: Models can be produced using standard actuators.	
Hermetic seal (Molded terminals/ Anti-coolant)	WL -139-N WL -140-N WL -141-N WL -145-N WL -RP40-N WL -RP60-N	For uses in locations subject to cutting oil or water	Refer to page 29 for information on the environment-resistant construction of Switches with Hermetic Seals.	All models except the low-temperature and heat-resistant models Note: Models can be produced using standard actuators. Only the WLCA2-N, WLGCA2-N, or WLG2-N can be produced for the WL—141-N and WL—145-N.	
Low-temperature	WL□-TC-N	Can be used at a temperature of -40°C (operating temperature range: -40 to 40°C), but cannot withstand icing.	Uses a general-purpose built-in switch. Epichlorhydrin rubber is used for rubber parts such as the O-ring, gasket, etc.	All models except airtight seal, hermetic seal, heat- resistant, corrosion-proof, and indicator-equipped models	
Heat-resistant	WL□-TH-N	Can be used in temperatures of 120°C (operating temperature range: 5 to 120°C).	Fluorine rubber is used for rubber parts such as the O-ring, gasket, etc.	All models except airtight seal, hermetic seal, heat- resistant, corrosion-proof, and indicator-equipped, ny- lon roller (WLCA2-26N-N), seal roller models, and res- in rod (WLNJ-2-N) models	
Corrosion-proof	WL□-RP-N	For use in locations subject to corrosive gases and chemicals.	Diecast parts, such as the switch box, are made of corrosion-proof aluminum. Rubber sealing parts are made of fluorine rubber, which aids in resisting oils and chemicals. Exposed nuts and screws (except the actuator section) are made of stainless steel. Moving and rotary parts such as rollers are made of sintered stainless steel or stainless steel. The Head, box, and cover are yellow.	All models except fork lever lock (WLCA32-41 to -44-N), low-temperature, heatresistant, and indicator-equipped models	
Weather-proof	WL□-P1-N	For use in parking lots and other outdoor locations.	 Rubber parts are made from epichlorhydrin rubber, which has a high-tolerance to changes in temperature. Rollers are made of stainless steel to improve corrosion resistance. Exposed nuts and screws are made of stainless steel. 	Only basic (WLCA2-N/ CA12-N/CL-N), and high- sensitivity overtravel (WLG2-N/G12-N/GL-N) models (excluding heat-re- sistant models). This does not apply to Low- temperature or Heat-resis- tance, or Indicator- equipped Switches.	

3

Selection Guide

With the WL-N Series, OMRON will combine the switch, Actuator, and wiring method required to build the ideal switch for your application.

The WL-N Series consists of four basic types: General-purpose, Environment-resistant, Spatter-protection, and Long-life Switches. WLCA2-N Switches can be used for the most common applications.

According to Operating Environment -

Normal Normal		Environment	Key specifications		Models
Normal Water-resistant to IP67. +5°C +120°C To increase heart resistance, the rubber material (fluorine rubber) and the plunger material (PEEK) have been changed. -40°C +40°C To increase resistance to cold, epichlorhydrin rubber and other measures are used. Rubber parts are made from epichlorhydrin rubber, which has a high-tolerance to changes in temperature. Stainless steel is used for the screws. Rollers are made of stainless steel to provide superior corrosion resistance. Corrosion-proof specifications have been used for the housing, uniform rubber has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for rubber parts, and stainless steel has been used for screws and nuts (except for the actuator) to increase resistance to oils, chemicals, and weather. Direct-wired Connectors/Pre-wired Connectors Indicator-equipped (Light-ON when Not Operating) Switches *1

1234 indicate the connector pin number.

Connector Pin Layout Diagram

AC

Note: Leakage current from indicator circuit may cause load malfunction (i.e., the load may remain ON). Make sure that the load operating current is higher than the leakage current. For countermeasures, refer to technical support on your OMRON website.

*1. Light-ON when not operating means the indicator is lit when the actuator is free and is not light when the Switch contacts (NO) close when the actuator rotates or is pushed down.

*2. The position of the positioning piece is not always the same. If using an L-shaped connector causes problems in application, use a straight connector.

Operation indicator Switches

Model	Item	Max. rated voltage	Leakage current (mA)
WL-LE-N	Neon lamp	125 AC	Approx. 0.6
WL-LE-IN	Neon lamp	250 AC	Approx. 1.9
WLIDN	LED	10 to 24 VAC/DC	Approx. 0.4
WL-LD-N	LED	115 VAC/DC	Approx. 0.5

Characteristics

Degree of protection		IP67	
Durability *1	Mechanical	15,000,000 operations min. *2	
Durability 1	Electrical	750,000 operations min. *3	
Operating speed		1 mm/s to 1 m/s (in case of WLCA2-N)	
Operating frequency	Mechanical	120 operations/minute min.	
Operating frequency	Electrical	30 operations/minute min.	
Rated frequency		50/60 Hz	
Insulation resistance		100 MΩ min. (at 500 VDC)	
Contact resistance		25 m Ω max. (initial value for the built-in switch when tested alone)	
	Between terminals of the same polarity	1,000 VAC (600 VAC), 50/60 Hz for 1 min	
Dielectric strength	Between currentcarrying metal part and ground	2,200 VAC (1,500 VAC), 50/60 Hz for 1 min *4	
	Between each terminal and non-currentcarrying metal part	2,200 VAC (1,500 VAC), 50/60 Hz for 1 min *4	
Vibration resistance	Malfunction	10 to 55 Hz, 1.5-mm double amplitude *5	
Shock	Destruction	1,000 m/s² max.	
resistance Malfunction		300 m/s ² *5	
Ambient operating temperature		-10 to +80°C (with no icing) *6	
Ambient operating hu	midity	35% to 95% RH	
Weight		Approx. 255 g (in case of WLCA2-N)	

- Note: 1. The above figures are initial values.
 - 2. The figures in parentheses for dielectric strength are those for the high-sensitivity and high-precision switches models.
- *1. The values are calculated at an operating temperature of +5°C to +35°C and an operating humidity of 40% to 70% RH. Contact your OMRON sales representative for more detailed information on other operating environments.
- *2. High-sensitivity Switches and Switches with Flexible Rod Actuators: 10 million operations min. 500,000 operations min. for weather-proof models.
- ***3.** Durability is 500,000 operations min. for high-sensitivity and high-precision models.

500,000 operations min. for weather-proof models.

Contact your OMRON representative for information on Environment-resistant Switches.

- *4. Switches with Connectors: 1,500 V.
- ***5.** Except Switches with Flexible Rod Actuators.
- *6. For low-temperature models this is -40°C to +40°C (with no icing). For heatresistant models the range is +5°C to +120°C.

Structure and Nomenclature

Structure

General-purpose Switches: WLCA2-N

*1. The available conduit screws are Pg 13.5, M20 and 1/2-14 NPT.

Indicators

Note: 1. Leakage current from indicator circuit may cause load malfunction (i.e., the load may remain ON). Make sure that the load operating current is higher than the leakage current.

For countermeasures, refer to technical support on your OMRON website.

- *1. Light-ON when operating means that the lamp lights when the Limit Switch contacts (NC) release, or when the actuator rotates or is pushed down.
- *2. Light-ON when not operating means the lamp remains lit when the actuator is free, or when the Limit Switch contacts (NO) close when the actuator rotates or is pushed down.

Environment-resistant Switches

Spatter-prevention Switches: WLCA2-LES-N

Actuator -

Roller, Roller Axis

Using stainless steel prevents spatter from adhering.

Operating Lever
A baking finish is applied to the surface so that any adhering spatter is easily removed.

Roller Lever Bolt

Stainless steel construction to prevent spatter adherence.

Double nut models are also available.

Screws

Externally visible screws on the head and cover are made of stainless steel to prevent spatter adherence.

Head Cap

Using fluororesin prevents spatter from adhering.

* Spatter means the zinc powder produced when welding.

Adhering spatter to the Limit Switch may cause malfunction of lever or lamp cover.

The lack of gap prevents spatter powder from clogging.

Long-life Switches

Head Cap

The head cap helps prevent the entry of cutting chips. You can use the protrusion on the cap to confirm the set position.

Actuator

Roller

The roller is made of self-lubricating sintered stainless steel.

It provides superior resistance to wear.

Lever

The lever is forged from anti-corrosive aluminum alloy. It provides superior corrosion resistance and outstanding strength. With a roller lever actuator, the actuator position can be set anywhere within 360°. (The lever cannot be mounted in the opposite direction.)

Operating Plunger

PEEK resin is used. It provides superior resistance to wear. You can change the mounting direction to use any one of the three operating directions (both sides, left side, or right side).

Cover Seal

High sealing performance is achieved. The seal also serves as a spacer.

There is no troublesome insulating paper, making it easy to work with the Switch.

Cover Setscrew

A combination Philips-slotted screw is used. A retainer prevents the screw from falling from the cover even when the screw is loose.

In addition to parallel threads for G1/2 tubing, direct-wired and pre-wired connectors have been added to the series.

General-purpose Switches

Switches with Flexible Rod Actuators Basic Switches

Coil Spring WLNJ-N

- *1. Do not operate the Switch in the direction of the axial center.
- *2. Stainless steel coil spring.
 *3. The range for operation is 1/3rd of the overall spring length from the end of the spring.

Coil Spring (Multi-wire) WLNJ-30-N

- *1. Do not operate the Switch in the direction of the axial center.
- *2. Piano wire coil spring.
- *3. The range for operation is 1/3rd of the overall spring length from the end of the spring.

Resin Rod

- *1. Do not operate the Switch in the direction of the axial center.
- To not operate the switch in the direction of the axial center.
 Polyamide Resin Rod
 The range for operation is 1/3rd of the overall rod length from the end of the rod.

Steel Wire

- *1. Do not operate the Switch in the direction of the axial center.
- *2. Stainless steel wire.
 *3. The range for operation is 1/3rd of the overall wire length from the end of the wire.

Note: Unless otherwise indicated, a tolerance of ± 0.4 mm applies to all dimensions.

Operating characteristics	Model	WLNJ-N	WLNJ-30-N	WLNJ-2-N	WLNJ-S2-N

Actuators (Levers Only)

Lever: Only rotating lever models are illustrated.

Note: 1. Unless otherwise indicated, a tolerance of ± 0.4 mm applies to all dimensions.

Lever: Only rotating lever models are illustrated.

Note: 1. Unless otherwise indicated, a tolerance of $\pm 0.4~\text{mm}$ applies to all dimensions.

When using the adjustable roller (rod) lever, make sure that the lever is facing downwards.Use caution, as telegraphing (the Switch turns ON and OFF repeatedly due to inertia) may occur.

Safety Precautions

Precautions for Safe Use

- Be sure to ground. If not, there is the possibility that electrical shock occurs.
- Do not touch charged switch terminals while the switch has carry current, otherwise there is the possibility that electrical shock occurs.
- Do not disassemble the limit switch or touch inside of it under supplying power, otherwise there is the possibility that electrical shock occurs
- Do not touch the wire or rod type actuator in order to prevent injury.
- Connect a fuse which has 1.5 to 2 times higher breaking current than the switch rated current to the switch in series in order to prevent the switch from short-circuit damage.
 On the occasion when using the switch with GB ratings, use a 10A fuse that complies IEC60269, either type gG.
- The durability of switch is depends on the operating condition.
 Be sure to check the condition with actual using condition before using, and use with the number of times of operating without a performance problem.
- Do not drop the switch. Otherwise, there is the possibility that the switch functions may be spoiled.
- Do not connect a Single Limit Switch to two power supplies that are different in polarity or type.
- Be sure to keep the load current less than the rated value.
 Otherwise, there is the possibility that the switch may be damage and/or burnout.
- Minimum operating load: 5 VDC 1 mA, resistive load, P level
 Note: The P level indicates the standard malfunction level at a reliability level of 60% (λ60).
 - (JISC5003) λ 60 = 0.1 × 10⁻⁶ per operation, which indicates an estimated malfunction of 1 out of every 10,000,000 operations at a reliability level of 60%.
- Do not use the Switch by itself in atmospheres containing flammable or explosive gases. Arcs and heating resulting from switching may cause fire or explosion.
- Be sure to prevent the foreign materials such like a scrapped cable intrusion in to the switch when wiring. Otherwise, there is the possibility of spoiling the normal operation.
- Never wire to the wrong terminals.
- Do not store or use the switch with following place.
 - Where the temperature fluctuates greatly
 - Where the humidity is very high and condensation may occur.
 - Where the vibration is too much
 - Where receiving direct sunshine.
 - Where receiving salty wind.
- Do not disassemble and/or modify the switch at anytime.
 Otherwise, there is the possibility of spoiling the normal operation.
- Do not apply the force such like deformation and/or degeneration to the switch. Otherwise, there is the possibility that the switch functions may be spoiled.

Precautions for Correct Use

Environment

- Take special care to use where there is fine powder, mud and/or foreign materials stacking. And check the condition with actual using condition before using. Then use without a performance problem.
- Do not keep the Switch in locations with corrosive gas, such as sulfuric gas (H₂S or SO₂), ammonium gas (NH₃), nitric gas (HNO₃), or chlorine gas (Cl₂), or high temperature and humidity. Otherwise, contact failure or corrosion damage may result.
- Seal material may deteriorate if a Switch is used outdoor or where subject to special cutting oils, solvents, or chemicals. Always appraise performance under actual application conditions and set suitable maintenance and replacement periods.
- Install Switches where they will not be directly subject to cutting chips, dust, or dirt. The Actuator and Switch must also be protected from the accumulation of cutting chips or sludge.

- Constantly subjecting a Switch to vibration or shock can result in wear, which can lead to contact interference with contacts, operation failure, reduced durability, and other problems.
 Excessive vibration or shock can lead to false contact operation or damage. Install Switches in locations not subject to shock and vibration and in orientations that will not produce resonance.
- The Switches have physical contacts. Using them in environments
 containing silicon gas will result in the formation of silicon oxide
 (SiO₂) due to arc energy. If silicon oxide accumulates on the
 contacts, contact interference can occur. If silicon oil, silicon filling
 agents, silicon cables, or other silicon products are present near
 the Switch, suppress arcing with contact protective circuits (surge
 killers) or remove the source of silicon gas.

Installing the Switch

• To install the Switch, make a mounting panel, as shown in the following diagram, and tighten screws using the correct torque.

Tightening Torque

- If screws are too loose they can lead to an early malfunction of the Switch, so ensure that all screws are tightened using the correct torque.
- In particular, when changing the direction of the Head, make sure that all screws are tightened again to the correct torque. Do not allow foreign objects to fall into the Switch.

No.	Туре	Torque	Screw type
(1)	Head mounting screw	0.78 to 0.88 N•m	M3.5 screw
(2)	Cover mounting screw	1.18 to 1.37 N•m	M4 screw
(3)	Allen-head bolt (for securing the roller lever)	4.90 to 5.88 N•m	M5 hexagon socket head cap screw
(3)	Allen-head bolt (for securing the adjustable rod lever)	0.88 to 1.08 N•m	M8 hexagon socket set screw
(4)	Terminal screw	0.59 to 0.78 N•m	M3.5 screw
(5)	Connector	1.77 to 2.16 N•m	G1/2orPg13.5orM20or 1/2-14NPT
(6)	Unit mounting screw	4.90 to 5.88 N•m	M5 hexagon socket head cap screw

Wring

In the case of mounting screw

- Use M3.5-nylon insulation covered crimp terminals (round type) for wiring.
 - Ex.) V1.25-M3.5(RAP1.25-3.5) (J.S.T. Mfg. Co.,Ltd.)
- Appropriate wire size is AWG16 (1.25 mm²).
- Do not supply electric power when wiring.
 Otherwise electric shock may result.
- Do not pull out the wires with excessive force. It may cause of coming off the wire.
- Use crimp terminals for wiring.
- In the case of lump unit, to avoid interference between lump unit and crimp terminals, wire according to right wiring figure.
 - Attach the lump unit spring to terminal screw certainly otherwise it's possible to be destroyed or shorted
- The ground terminal is only installed on models with ground terminals.

In the case of prewired connecter and direct connecter

- Holding the connecter certainly when pulling connecter.
- Don't pull the cable holding it.

How to handle

Changing direction of the head

 By removing the screws in the two corners of the head, the head can be set any of four directions. Be sure to change the plunger for internal operations at the same time.

Built-in Switch

• Do not remove or replace the built-in switch.

Overtravel Markers

- All Switches with Roller Lever Actuators except for Switches with Fork Lever Locks and Low-temperature Switches have a set position marker plate.
- To allow the roller lever type actuator to travel properly, set the roller lever according to the dog or cam stroke so that the arrowhead of the lever is positioned within overtravel markers as shown.

Connectors

- Tighten the connector with the appropriate torque to prevent deformation.
- Use the OMRON type SC connector series, which is prepared separately, suitable for outer diameter of cable and inner diameter of seal rubber.
- Make sure to wrap the connector with the seal tape, except the connector which has O-ring, to keep the sealability.
- To conform to CSA, use a CSA certified water tight treated conduit hub
- Even when the connector is assembled and set correctly, the end
 of the cable and the inside of the Switch may come in contact. This
 can lead to malfunction, leakage current, or fire, so be sure to
 protect the end of the cable from splashes of oil or water and
 corrosive gases.

Microload Applications

- The switch contacts can be used both for standard loads and microloads, but once a contact has been used to open and close a load it can no longer be used for lower loads. Doing so will damage the contact surface and reduce contact reliability.
- If an inrush current or other sudden load occurs during a switch operation, the switch will begin to degrade severely which can result in reduced durability.
- Use a contact protection circuit if required.

Indicator

Indicator-equipped switch has contacts and indicator in parallel. When contacts are open, leakage current flows through the indicator circuit and may cause load's malfunction.

Please check the load's OFF current before use the indicatorequipped switch. Leakage current may cause load malfunction (i.e., the load may remain ON). Make sure that the load operating current is higher than the leakage current.

For countermeasures, refer to technical support on your OMRON website.

Terminal Plate

 By using the Terminal Plate (sold separately), as shown in the following diagram, the Switch can be used as a single-polarity double-break switch.

Using a WL□-2N Switch Mounted from the Side

If you replace a previous Switch with a WL—2N-N Switch, a Mounting Plate (sold separately) is available to maintain mounting compatibility. If you use the Mounting Plate, the Switch mounting holes and actuator position will be compatible. (The position of the dog will not need to be changed.)

Operation

- Carefully determine the position and shape of the dog or cam so that
 the actuator will not abruptly snap back, thus causing shock. In order
 to operate the Limit Switch at a comparatively high speed, use a dog
 or cam that keeps the Limit Switch turned ON for a sufficient time so
 that the relay or valve will be sufficiently energized.
- The method of operation, the shape of the cam or dog, the operating frequency, and the travel after operation have a large influence on the durability and operating accuracy of the Limit Switch. The cam or dog must be smooth in shape.

 Appropriate force must be imposed on the actuator by the cam or dog in both rotary operation and linear operation.
 If the dog touches the lever as shown below, the operating position will not be stable.

 Unbalanced force must not be imposed on the actuator. Otherwise, wear and tear on the actuator may result.

• With a roller actuator, the dog must touch the actuator at a right angle. The actuator or shaft may deform or break if the dog touches the actuator (roller) at an oblique angle.

 Make sure that the actuator does not exceed the OT (overtravel) range, otherwise the Limit Switch may malfunction. When mounting the Limit Switch, be sure to adjust the Limit Switch carefully while considering the whole movement of the actuator.

 The Limit Switch may soon malfunction if the OT is excessive.
 Therefore, adjustments and careful consideration of the position of the Limit Switch and the expected OT of the operating body are necessary when mounting the Limit Switch.

 When using a pin-plunger actuator, make sure that the stroke of the actuator and the movement of the dog are located along a single straight line.

Others

- For long term (over a year) storage, check according to Operating characteristics, Contact resistance and Dielectric strength at least. And check with using condition.
- The durability of the Switch is greatly affected by operating conditions

Evaluate the Switch under actual working conditions before permanent installation and use the Switch within a number of switching operations that will not adversely affect the Switch's performance.

Using the Switches

Item	Applicable models and Actuators	Details
Changing the Installation Position of the Actuator By loosening the Allen-head bolt on the actuator lever, the position of the actuator can be set anywhere within the 360°. With Indicator-equipped Switches, the actuator lever comes in contact with the top of the indicator cover, so use caution when rotating and setting the lever. When the lever only moves forwards and backwards, it will not contact the lamp cover. (This does not apply to Long-life Switches.)	Roller Levers: (WLCA2-N, WLCA2-2-N, WLCA2-2N-N, WLG2-N, WLCA2-7-N, WLCA2-8-N, WLGCA2-N, WLMCA2-N, WLMG2-N, WLMGCA2-N) Adjustable Roller Levers: (WLCA12-N, WLCA12-2-N, WLCA12-2N-N, WLG12-N) Adjustable rod lever: (WLCL-N, WLCL-2-N, WLCL-2N-N, WLGL-N, WLCA14-N, WLCAL5-N)	Loosen the Allen-head bolt, set the actuator's position and then tighten the bolt again.
Changing the Orientation of the Head By removing the two screws of the Head, the Head can be set in any of the four directions. Be sure to change the plunger for internal operations at the same time. The roller plunger can be set in either of two positions at 90°	Roller Levers: (WLCA2-N, WLCA2-2-N, WLCA2-2N-N, WLG2-N, WLCA2-7-N, WLCA2-8-N, WLGA2-N, WLMCA2-N, WLMG2-N, WLMGCA2-N, Adjustable Roller Levers: (WLCA12-N, WLCA12-2-N, WLCA12-2N-N, WLG12-N) Adjustable rod lever: (WLCL-N, WLCL-2-N, WLCL-2N-N, WLGL-N, WLCA14-N, WLCAL5-N) Horizontal plunger (WLSD□-N) Sealed top-roller plunger (WLD28-N) Note: Does not include the -RP60 Series or -141 Series.	Head Loosen the screws.
Changing the Operating Direction By removing the Head on models which can operate on one-side only, and then changing the direction of the operational plunger, one of three operating directions can be selected.	Roller Levers: (WLCA2-N, WLCA2-2-N, WLCA2-2N-N, WLG2-N, WLCA2-7-N, WLCA2-8-N, WLGCA2-N, WLMCA2-N, WLMG2-N, WLMGCA2-N) Adjustable Roller Levers: (WLCA12-N, WLCA12-2-N, WLCA12-2N-N, WLG12-N) Adjustable rod lever: (WLCL-N, WLCL-2-N, WLCL-2N-N, WLGL-N, WLCA14-N, WLCAL5-N)	The output of the Switch will be changed, regardless of which direction the lever is pushed. Operating Operating Not operating Operatin
Installing the Roller on the Inside By installing the roller lever in the opposite direction, the roller can be installed on the inside. (Set so that operation can be completed within a 180° level range.)	Roller Levers: (WLCA2-N, WLCA2-2-N, WLCA2-2N-N, WLG2-N, WLCA2-7-N, WLCA2-8-N, WLGCA2-N, WLMCA2-N, WLMG2-N, WLMGCA2-N) Fork lever lock: (WLCA32-4□-N) Note: Except for Switches with variable roller levers.	Loosen the Allen-head bolt.

WL-N/WLM-N

Operation of Fork Lever Locks

A Switch with a Fork Lever Lock is constructed so that the dog pushes the lever to invert the output and this inverted state is maintained even after the dog moves on.

If the dog then pushes the lever from the opposite direction, the lever will return to its original position.

NO terminal: ON

Limit Switch Connectors

Connectors (SC Series)

Cabtire cables and flexible tubes with various diameters are used to connect machine tools and controllers with Limit Switches. To ensure the watertightness of the edges of the conduits, use an SC Connector that is suitable for the external diameter of cable and model of Limit Switch

Ordering Information Connector for Cabtire Cable

Conduit	Applicable cable	Inner diameter (D)	External diameter of cable		Model	Applicable model
		of seal rubber	Min.	Max.	Model	Applicable model
JIS B 0202 G½ -	Cabtire cable (general- purpose)	7 mm	5.5 mm	7.5 mm	SC-1M	WL-N, D4A-□N, D4B-□N, ZE, ZV, ZV2, XE, XV, XV2
		9 mm	7.5 mm	9.5 mm	SC-2M	
		12.5 mm	11 mm	13 mm	SC-3M	
		14 mm	12 mm	14 mm	SC-4M	
		11 mm	9 mm	11 mm	SC-5M	
	Cabtire cable (anti- corrosive)	7 mm	5.5 mm	7.5 mm	SC-21	
		9 mm	7.5 mm	9.5 mm	SC-22	
		12.5 mm	11 mm	13 mm	SC-23	
		14 mm	12 mm	14 mm	SC-24	
		11 mm	9 mm	11 mm	SC-25	
½-14NPT	Cabtire cable	7 mm	5.5 mm	7.5 mm	SC-1PT	D4A-□N
		9 mm	7.5 mm	9.5 mm	SC-2PT	
		12.5 mm	11 mm	13 mm	SC-3PT	
		14 mm	12 mm	14 mm	SC-4PT	
		11 mm	9 mm	11 mm	SC-5PT	

Note: Please use sealing tape with SC Connectors. SC-1M to SC-5M, however, are provided with an O-ring (NBR) and therefore sealing tape is not necessary to ensure a proper seal.

Simple Connectors (Not Suitable for Locations Subject to Oil or Water)

Conduit	Applicable cable	Inner diameter (D) of seal rubber	External diameter of cable		Model	Applicable model
			Min.	Max.	Wodel	Applicable filodel
JIS B 0202 G½	Cabtire cable	10.6 mm	8.5 mm	10.5 mm	SC-P2	WL-N, D4A-□N, D4B-□N, ZE, ZV, ZV2, XE, XV, XV2
Pg13.5		9.6 mm	7.5 mm	9.5 mm	SC-P3	WL□-G-N
JIS B 0202 G½		9 mm	7.5 mm	9 mm	SC-6	WL-N, D4A-□N, D4N *, D4N-□R *, D4B-□N, ZE, ZV, ZV2, XE, XV, XV2

Note: Simple connector are made of resin. If more sealing capability is required, use one of SC-1M to SC-5M, which have metal casings. Models marked with an asterisk (*) however, can only be used with resin connectors.

Dimensions and Structure

Connectors for Cabtire Cable

As for models without an O-ring, please use sealing tape with SC Connectors.

Metal Models without O-ring

Resin Models G½ SC-P2

Resin Models Pg13.5 SC-P3

Resin Models G½ SC-6

Note: Dimensions not shown in the above diagrams have a variation of $\pm 0.4 \ \text{mm}.$

^{*} Diameter of Part Marked with Asterisk

Model	Inner diameter (D) of sealed rubber	Internal diameter (E) of washer	Applicable cable
SC-21, -1M, -1PT	7 mm	10.4 mm	5.5 to 7.5-mm dia.
SC-22, -2M, -2PT	9 mm	13.2 mm	7.5 to 9.5-mm dia.
SC-23, -3M, -3PT	12.5 mm	14.6 mm	11 to 13-mm dia.
SC-24, -4M, 4PT	14 mm	14.6 mm	12 to 14-mm dia.
SC-25, -5M, -5PT	11 mm	13.2 mm	9 to 11-mm dia.
SC-6	9 mm	10 mm	7.5 to 9-mm dia.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
