

OMRON

Smart Sensors ZFV-C

Smart Sensors with Ultra-High-Speed Color CCD Cameras

The Next Generation of Advanced Color Sensing. For Demanding, Color-Critical Applications.

realizing

# Have you heard about some of the sensor problems on your production lines?

If you listen carefully, you'll probably hear people complaining about these sensor problems.

With optical sensors...

With image sensors...

It's difficult to make fine settings.

It takes time to make settings and adjustments.

Detection is unstable, leading to quality problems.

(4.) (4.)

They're expensive.

It's difficult to reset the line when products change. Only people with technical knowledge can operate them.

Optical sensors and image sensors.

The general consensus on the production line is that they both have their advantages and disadvantages.

Many users hesitate to introduce a full-scale image sensor system, but at the same time, find it difficult to install and use an optical sensor system.

Now there is a sensor that answers these problems.

Not an optical sensor and not an image sensor, it's a brand new type of smart sensor.

With the increasing importance that is being placed on quality control today,

you will find this sensor to be a major help in moving your production lines forward.

Introducing the new Smart Sensor from OMRON.

Simple to use.
Detection abilities close to human vision.
Smart Sensor provides the best combination of optical and image sensors.

Color or position differences are a good example.

A person can see these with a glance, but it's both costly and labor-intensive to set up a system that will allow a sensor to detect these differences.

If only there were a simpler way, something that resembled human vision...

Now there is, because we have added color capabilities to the Smart Sensor.

In addition to being able to distinguish colors, the new Smart Sensor also offers stable detection for ordinary, conventional workpieces.

It goes a long way toward answering many of the problems that today's production lines are facing.

### From sensing points to sensing areas

With optical sensors...

There's a chance they will fail to detect due to problems like a shift in the position of printed text.

### The color ZFV!

It distinguishes shapes, so its measurements maintain stability.

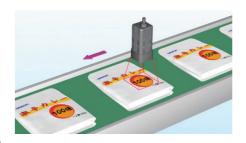

The Color Filter function also improves contrast for more stable detection of even faint text

Freshness date 2009 6 20

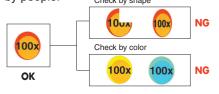

Reliability

### Double-check with shape and color

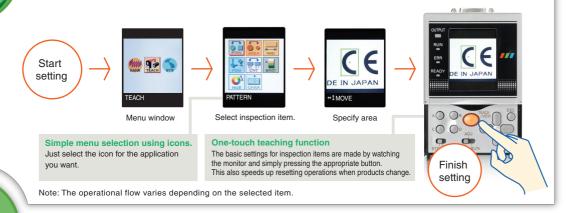

Smart Sensor inspects objects using both shape and color, the two main criteria used by people.

Check by shape

Simplicity

### Set-up is easy, even for first-time users.

Ease

### Easier than image sensors in a variety of ways.

With smart sensors...

With image sensors...

You need to worry about the initial cost and the work to build the system.

Start-up is easy because the sensor and the light source are integrated. Of course, it is also reasonably priced.

You don't need advanced functions for simple inspections.

Only the functions that your production people truly need are provided. By including the essential functions of the image sensor, we have achieved highly stable measurement.

Settings are complicated and maintenance is a chore.

Even new users can make settings and adjustments easily by selecting the icons while watching the LCD monitor. You don't have to be an expert to use it.

# OMRON Color Technology Provides Superior Sensing.

The original Smart Sensor was designed to be easy enough for anybody to use, and our color model shares the same characteristic. The ZFV-C Color Smart Sensor is designed with the same Target, Teach, Go simplicity as the original ZFV.

The Color Filter function is completely automatic, and colors can be easily extracted while watching the monitor. This sensor is smart enough to handle even advanced applications.

### The Automatic Color Filter function adds stability to your images.

This function increases the image contrast to make measurements more stable. There are a total of seven color filters in all. The one that obtains the most suitable contrast is automatically selected, so there's no need to worry about color setting parameters.

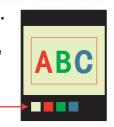

### Simply choose the candidate color to complete color extraction.

For items that use color extraction, you simply specify the area you want.

The color components in that area are then analyzed and the extraction color candidates are automatically displayed. All you have to do is select the color to be measured.

The extraction conditions for the candidate colors can also be fine-tuned if necessary.

This is OMRON's unique human-machine interface for color extraction.

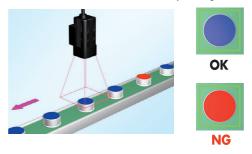

### Actual color measurement

Inspecting for the intermixture of different-colored packages

Actual colors can be measured, and those differing from the reference color can be easily distinguished.

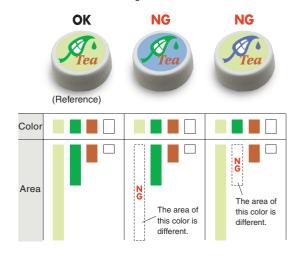

### Simultaneous, one-touch checking of multiple colors

Extraction color candidates

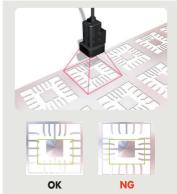

Inspecting for the intermixture of different cap types

Multiple colors can be extracted, so that the surface area of each color can be distinguished.

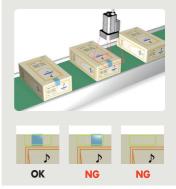

# Pattern Pattern

 Measure difference or presence of patterns to match shape of object.

# Position

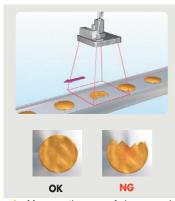

Measure the edge position of labels or sheets.

# Seven Highlevel Matching Capabilities for a Wide Range of Applications

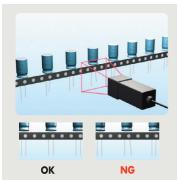

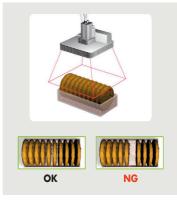

Measure the area of shapes and compare against model to detect broken cookies.

# Width

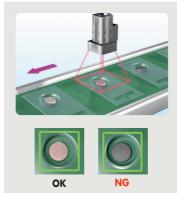

Measure width between leads.

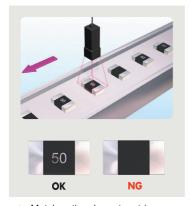

Count the number of cookies.

# Brightness

Detecting dirt on battery surfaces

# BiD Character

Match entire character string or detect one missing character.

# **Additional Special Features**

### Wider Field of View of 150 mm

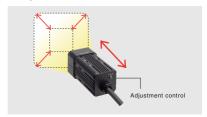

With an FOV from 5 to 150 mm, you can inspect even large workpieces that could not be previously handled.

### **Adjustable View**

### Simple Focus Adjustment

An easy to use, manual focus adjustment on the camera eliminates the need to change the head or modify programming for different workpiece sizes

### **Optimize Lighting Pattern**

Intelligent Lighting ZFV-SC10/-SC50 -SC90

The lighting pattern can be varied to ensure a uniformly bright display even when the Sensor Head is mounted at an angle. Also, the light turns in sync with the shutter operation, for excellent stability and a long service life.

### **Fast Mounting**

Multi-mount Bracket ZFV-SC10/-SC50 -SC90

Mounts to either of the four Sensor Head surfaces, allowing highly flexible mounting and removal.

### **Ultra Fast for High-speed Production Lines**

### High-speed Random Shutter CCD

Captures images without any blur, even on high-speed lines. Even at high shutter speeds, the LED power is automatically controlled to provide crisp, clear images.

### IP67-compliant Design ZFV-SC90W/-SC150W Washable Head

Featuring an IP67-equivalent design, these models can be completely immersed in water for washing. The entire structure, including the light source, is water resistant.

### **High-quality Data Transmission**

### Digital Interface Capability

The image captured by the Sensor Head is quickly transmitted in digital format, making it immune to noise.

### Optional Lighting with Easy, One-touch Mounting ZFV-SC50 -SC50 -

A wide variety of optional Lighting Units are available for when the light intensity of the integrated lighting is not sufficient, or when throughbeam lighting or some other lighting method is required. Simply plug in the connector to add on.

There is also no need for a special power supply for lighting. Plus, the optional Units feature strobe lighting in sync with the Sensor Head shutter, to provide stable lighting for an extended period of time and a long service life.

Bar-type low-angle lighting ZFV-LTL04

Light source for throughbeam lighting

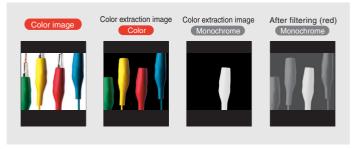

### Vision Amplifier with Monitor Features Versatile Functions in a Compact Body

Integrated with a 1.8-inch LCD monitor, this Amp is the same compact size as our monochrome models. It enables operation while viewing the image, so the measurement status can be checked while the line is moving. It also features USB and RS-232C interfaces for connection to a personal computer.

### **Selectable Display Patterns**

### One-touch Display Selection

Select the image display that is easiest to see from among color, monochrome, and color extraction display patterns.

# **Quick and Easy Operation**

Fixed keys are allotted with various functions for easy, one-touch operation.

Note: Button B is used for function expansion.

### Japanese-English Selection Multi Menu

The menu can be switched to Japanese or English to match the application.

### **High-speed Color Processing**

The processing speed is approximately the same as that for monochrome, even when detecting color images with high precision.

OMRON's image processing technologies remove the usual hesitation to use color processing due to its reduced efficiency.

### The Industry's Fastest Real-time Search

An original CCD drive technology and image processing engine enable ultra-fast response by processing data as the image is being captured.

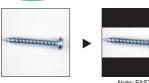

The actual image processing time thus becomes zero, making the total processing speed 13 ms maximum.

### Even Faster — 5 ms Partial Capture Function

The processing speed can be further increased by limiting the image capture to only the part that is required for inspection. Processing requires 8 ms in FAST mode, and 5 ms (max. speed) in MAX mode.

Note: FAST mode

### **Excellent Expandability Meets Even More Applications**

With today's rapid pace of new product development, it is essential to select sensors that have future expandability. The Smart Sensor provides the same level of quality control as larger sensor systems, thanks to its newly enhanced application capabilities and data management and analysis.

### **Flexible Combinations**

### High-speed Digital Bus Connection

Controllers can now be directly connected to prevent delays in response. By altering the connection, multiple areas can be simultaneously processed, measurement items can be combined, and the output from two Sensor Heads can be integrated. This also provides sufficient response to future workpiece changes.

### **Convenient for Personal Computer Operation and Management**

### Smart Monitor ZFV Support Software

This software allows settings and image data to be saved and loaded with a personal computer. For details on the Smart Monitor ZFV Support Software, please contact your OMRON representative.

### Easy Operation Achieved by Considering the Operator's Viewpoint

In addition to offering easy basic operation, the ZFV has been designed to provide the best possible operation in a variety of situations.

It helps your quality control system evolve and become smarter by allowing machines to handle the bothersome tasks.

### **Handy for Maintenance**

### I/O Monitor Function

The parallel I/O status can be displayed on the monitor to simplify wiring checks, to make maintenance and system start-up faster and easier.

### **Visually Check Judgment Settings**

### Adjustment Mode

Judgment settings are displayed in bar format, so judgment conditions can be intuitively set

### **Flexible Controller Installation**

Flexible installation meets the specific needs of each production line. In addition to DIN rail mounting, installation is easy in control panels.

# Workpiece-movement Teaching

The optimum lighting can be automatically selected by using an external trigger to input an image of a moving workpiece.

### **Extend the Service Life** ECO Mode

When not in use, the LCD backlight is automatically turned OFF. This greatly extends the service life compared with having the backlight constantly ON.

### **Versatile Teaching Modes**

### Freeze-screen Teaching

This function enables easy one-button teaching, using an image of an instantaneous event that was captured with an external trigger.

Panel Mounting Adaptor
