

## Operation Example

The following is an execution example of the previous program:

Bold characters represents operation and the carriage return symbol represents the RETURN Key. This program cannot execute transmission normally unless the initial transmission settings of the personal computer are: even parity, 7 bits, 2 stop bits, and the same baud rate as the Processor. If the connectors are not properly connected, the program may stop halfway.

**RUN** ↵

SEND DATA : @**00RX** ↵

RESPONSE : @00RX00F00151000 FCS \*

(Unit No. 00 display value is read.)

Response is as follows:
